ABOUT ME

Computer Science Graduate | Data Analyst & Aspiring Data Scientist | Python, SQL, Power BI, Machine Learning & Automation | Support Operations & Business Insights

WORK EXPERIENCE

TELUS Digitals Riga, Latvia

Senior Product Specialist

01/06/2025 – Current

- Troubleshoot advanced advertising issues including ad delivery, billing, targeting, and performance anomalies.
- Analyze backend data and case logs to identify root causes, recurring issues, and patterns across user reports.
- Contribute to process improvements by summarizing trends and sharing insights with internal quality and product teams.
- Utilize dashboards and knowledge systems to interpret technical data and enhance support accuracy.

Product Specialist

04/11/2024 – 01/06/2025

- Provide prompt and professional support to users and business clients through chat, email, and phone, addressing issues related to accounts, content, and platform features.
- Troubleshoot and resolve customer issues, collaborating with internal teams for complex cases and ensuring timely follow-up.
- Assist business clients with ad campaigns, performance metrics, billing inquiries, and best practices for platform usage.
- Enforce platform policies by moderating content and addressing violations through content removal or account suspension.
- Collaborate with cross-functional teams (product, legal, technical support) to improve customer experience and resolve escalated issues.
- Maintain knowledge base, report customer feedback, track support metrics, and contribute to continuous learning and platform improvements.

ALIEF MAJU ENTERPRISE (M) SDN BHD Gua Musang, Kelantan, Malaysia

Data analyst

01/07/2021 – 04/09/2024

- Collected, processed, and analyzed large datasets to identify trends, patterns, and actionable insights.
- Prepared analytical reports and dashboards to support strategic and operational decision-making.
- Managed and updated CRM systems to support business-to-business communications and improve workflow efficiency.
- Analyzed marketing and advertising campaign data across digital platforms to track performance and optimize outcomes.
- Supported market research initiatives by interpreting data to identify growth opportunities and business improvements.

Demola Global Riga, Latvia

Technical Specialist (Internship)

01/09/2023 – 01/12/2023

Demola's project focused on enhancing university accessibility for mature-age students.

- Collaborated in a diverse team to identify the specific needs and challenges faced by mature-age students seeking university information.
- Played a pivotal role in the development of a user-friendly chatbot and a website designed to provide easy access to essential university information.
- Contributed to the design and implementation of a complementary website, ensuring that it was intuitive and accessible to the target audience.
- Successfully created a chatbot and website that simplifies the process for mature-age students to obtain university-related information, enhancing their educational experience.
- The project was commended for its innovative approach to addressing the unique needs of non-traditional university students.

Skills: Data Science · Web Design · Angular · Statistical Data Analysis · Business Strategy · Entrepreneurship · HTML · Cascading Style Sheets (CSS)

EDUCATION AND TRAINING

23/05/2024 – CURRENT Riga

Master of Science in Computer Science ISMA, Informācijas Sistemu Menedžmenta Augstskola

Website <https://isma.lv/>

14/01/2021 – 16/01/2024 Riga

Bachelor Degree of Engineering Science in Computer Science and Control Rīgas Tehniskā universitāte (Riga Technical University)

Website <https://www.rtu.lv/> | **Field of study** Informat, Computer Science and Information Technology | **Final grade** 6.52 |

Type of credits ECTS | **Number of credits** 180 | **Thesis** Comparative Analysis of Pandas and Polars Python Libraries

2024 Riga, Latvia

Data Visualization with Python Issued by - Coursera, Authorized by - IBM

Levels: A1 and A2: Basic user; B1 and B2: Independent user; C1 and C2: Proficient user

PROJECTS

EduPulse – Student Performance Prediction System Using Educational Data Mining

Tech: Python, Flask, scikit-learn, pandas, NumPy, HTML, CSS, Jinja, joblib

- Developed a web-based student early warning platform that predicts academic risk, explains feature importance, and compares predictions with actual outcomes.
- Evaluated 4 ML algorithms and implemented automatic best-model selection; selected Random Forest with 93.67% accuracy, 0.9057 F1-score, and 0.9949 ROC AUC.
- Validated predictions on 79 unseen student records, achieving 89.87% accuracy and an 85.93% overall comparison score.

Customer Support Intelligence Platform – SLA Breach Prediction and Operational Analytics

Tech: Python, Streamlit, scikit-learn, pandas, NumPy, Plotly, SQL, joblib

- Developed an interactive support analytics platform that predicts SLA breach risk, monitors ticket performance, and provides dynamic recommendations for support teams.
- Processed 500 customer support ticket records and analysed key fields such as ticket priority, category, channel, team, escalation status, resolution time, and SLA breach outcome.

- Built a Random Forest machine learning model to predict SLA breach risk; achieved 96.00% accuracy and 0.9737 F1-score on the demo test dataset.
- Created a dynamic Streamlit dashboard with 4 KPI cards, 5 risk levels and multiple visualisations including SLA breach by priority, breach rate by category, ticket volume trends, resolution time distribution, and recommended action mix.
- Added automated ticket recommendations such as Immediate Senior Review, Prioritize Queue Review, Monitor Resolution Delay, and Normal Handling to help teams act before SLA failures happen.

Data Visualization and Business Intelligence Using LOOKER

- Developed an interactive dashboard using Looker Studio to analyze and visualize order data, enhancing strategic decision-making capabilities.
- Designed various charts to display key metrics such as order trends by month and year, regional sales distribution, and performance by customer segments and product categories.
- Synthesized complex datasets into actionable insights, presenting order volumes, customer distribution, and sales performance across different U.S. states and cities, which facilitated data-driven decisions in marketing and sales strategies.

CASINO DATA VISUALIZATION PROJECT

- Utilized Tableau to analyze and visualize complex datasets from a casino.
- Expertly created 6 different Dashboards Contains multiple charts and graphs to display monthly trends and quarterly percentage changes in casino operations.
- Developed innovative visualizations, including graphs highlighting critical casino statistics and operational insights.
- Employed advanced Tableau functionalities like calculated fields using 'Fixed' expressions and dynamic user inputs through parameters.
- Demonstrated proficiency in data manipulation and presentation by adjusting original datasets for optimal visualization performance.

DATA ANALYSIS AND VISUALIZATION OF MOVIE INDUSTRY DATASET

- Led an analysis project utilizing Python (Pandas, NumPy, Seaborn, Matplotlib) to extract insights from a movie dataset through data cleaning, manipulation, and visualization.
- Performed detailed statistical analyses to explore correlations between movie attributes and financial outcomes using Pearson, Kendall, and Spearman methods, visualizing these relationships with regression plots and heatmaps.
- Improved data quality by identifying and removing duplicates, filling missing values, and transforming categorical variables into numerical formats, enabling more accurate predictive modeling of movie revenues.

HOUSING DATA CLEANING PROJECT

- Executed a SQL data cleaning project for the Nashville Housing table, utilized advanced SQL functions and techniques such as CONVERT, ISNULL, SUBSTRING, and PARSENAME to standardize date formats and segment complex address fields into structured data columns.
- Implemented data integrity checks, including duplication removal with ROW_NUMBER and partitioning logic, significantly improving database performance and query response time.
- Enriched the dataset by filling in missing address details from comparable records and transforming abbreviated entries into readable formats using conditional (CASE) statements.
- Facilitated better data analysis and reporting capabilities by ensuring all entries were unique and standardized, supporting subsequent real estate data assessments and decision-making processes.

COVID 19 DATA ANALYSIS

- Created a database in SQL to analyze COVID-19 data Based on COVID deaths and covid Vaccination over the world.
- Used Joins, CTE's, Temp Tables, Windows Functions, Aggregate Functions, Data type Conversions and created Views to explore the global data on confirmed COVID-19 deaths. [Click this to access the SQL Script](#)
- Built a dashboard in Tableau by reporting my findings regarding the Covid-19 exploratory analysis. [Click this to access the Tableau Dashboard](#)

ADVANCED EXCEL DATA ANALYTICS AND VISUALIZATION PROJECT

- Managed and executed an Excel-based data analytics project, initiating with the development of worksheets, pivot tables, and a comprehensive dashboard.
- Employed Excel's data tools for robust data cleaning, including deduplication and standardization (e.g., gender clarification and age categorization using nested IF statements).

- Analyzed behavioral data through creation of multiple pivot tables, examining variables like income, bike purchases, and commute distances; visualized results using clustered bar charts and line charts.
- Designed an interactive dashboard integrating advanced visual elements and filters to succinctly display data insights, facilitating strategic decision-making and enhanced reporting capabilities.
