Portfolio: <https://ridhan-portfolio.vercel.app/>

PROFESSIONAL SUMMARY

Computer Science graduate and Master's student with 4+ years of experience in Data Analysis, Operational Analytics, Support Operations, Business Intelligence, Automation, and Machine Learning projects. Skilled in SQL, Python, Power BI, Tableau, Looker Studio, KPI Reporting, SLA Monitoring, Dashboard Development, Process Improvement, and Workflow Automation. Proven track record recognized with two Above & Beyond Awards at TELUS Digital and a 1st Place Mobility City Challenge Hackathon win with European Grand Final qualification. Targeting Data Analyst, Operations Analyst, Business Intelligence Analyst, Reporting Analyst, Automation Analyst, Support Operations Analyst, and Junior Data Scientist roles.

TECHNICAL SKILLS

Programming & Data Analysis: Python, SQL, R, Pandas, NumPy, NLTK, Matplotlib, Seaborn, scikit-learn, TensorFlow, Data Cleaning, Exploratory Data Analysis, EDA, Statistical Analysis, Data Transformation, Data Manipulation

BI & Visualization: Power BI, Power Query, Tableau, Looker Studio, Data Visualization, Dashboard Development, KPI Reporting, Business Intelligence, Reporting Dashboards, Excel, Microsoft Office, Google Sheets, Google Drive, Google Docs, Google Slides, Google Meets, Google Trends, Infogram, Plotly, Folium

ML & Predictive Analytics: Random Forest, Classification Models, Predictive Modeling, Model Evaluation, Feature Importance, SLA Breach Prediction, Machine Learning, Recommendation Systems, ROC AUC, F1-score, Accuracy Evaluation

Operations & Analytics: Operational Analytics, SLA Monitoring, Queue Analysis, Escalation Analysis, Trend Analysis, Root Cause Analysis, Process Improvement, Workflow Optimization, Support Operations, Operational Reporting, Data-driven Decision Making, Reporting Procedures, Stakeholder Collaboration

Databases & Querying: MySQL, PostgreSQL, SQL Joins, CTEs, Window Functions, Views, Temporary Tables, Aggregate Functions, Data Type Conversion, Data Validation, Query Logic

Tools & Platforms: Streamlit, Flask, Django, Bootstrap, HTML, CSS, Jinja, joblib, Jupyter Notebook, JupyterLab, Git, GitHub, GitLab, Docker, CRM Systems, Knowledge Base Systems

Automation & AI: Workflow Automation, Reporting Automation, AI Automation, Google Sheets Automation, Advanced Formulas, Lookup Functions, Rule-based Validation, Automated Tracking, Recommendation Systems

Languages: English (Fluent), Tamil (Native), Latvian (Basic)

PROFESSIONAL EXPERIENCE

ALIEF MAJU ENTERPRISE (M) SDN BHD | Gua Musang, Malaysia | Jul 2021 – Present

Role: *Data Analyst*

Responsibilities:

- Analyzed sales, purchase, stock, customer, and supplier data to identify product demand, business trends, and slow-moving items.
- Built reports and dashboards using Excel, Google Sheets, SQL, Power BI, Tableau, and Looker Studio to track sales, inventory, and customer activity.
- Improved inventory visibility by reviewing stock records, updating product data, and monitoring fast-moving products and reorder needs.
- Supported import and export operations by organizing supplier, customer, invoice, order, and communication records.
- Prepared business reports that helped management review sales trends, stock movement, customer activity, and operational performance.

Impact:

- Improved business reporting quality by transforming raw data into structured reports and dashboard insights.
- Supported KPI Reporting and Business Intelligence by creating analysis outputs for operational decision-making.
- Enabled better marketing decisions by analyzing campaign performance and customer behavior trends.

TELUS Digital | Riga, Latvia | Jun 2025 – May 2025

Role: Senior Product Specialist

Responsibilities:

- Analyzed advanced advertising, billing, targeting, ad delivery, and performance-related issues for business clients.
- Used backend data, case logs, dashboards, and internal knowledge systems to identify root causes and recurring operational patterns.
- Supported Operational Analytics by reviewing user reports, technical signals, and case trends to improve issue understanding.
- Collaborated with internal quality and product teams by sharing insights related to recurring platform issues and customer pain points.
- Applied SLA Monitoring, KPI awareness, and process knowledge to support accurate case handling and operational consistency.

Impact:

- Improved issue investigation quality by using backend data analysis, dashboard interpretation, and root cause analysis.
- Supported Process Improvement by summarizing recurring trends and sharing actionable insights with internal teams.
- Contributed to Business Intelligence decision support by converting case patterns into useful operational insights.
- Recipient of Above & Beyond Award Q4 2025 — recognized for outstanding performance, innovation, and exceeding role expectations.

TELUS Digital | Riga, Latvia | Nov 2024 – Jun 2025

Role: Product Specialist

Responsibilities:

- Provided professional support to users and business clients through chat, email, and phone channels.
- Troubleshoot account, content, advertising campaign, billing, and platform feature cases.
- Assisted business clients with campaign performance metrics, best practices, billing inquiries, and platform usage issues.
- Collaborated with product, legal, and technical support teams to resolve escalated cases and improve customer experience.
- Maintained knowledge base usage, tracked support metrics, reported customer feedback, and contributed to continuous improvement.

Impact:

- Improved customer support outcomes by resolving operational and platform issues through structured troubleshooting.
- Supported SLA Monitoring and timely follow-up by managing cases across multiple communication channels.
- Recipient of Above & Beyond Award Q2 2025 — awarded for exceptional dedication and results-driven performance.
- Two-time Above & Beyond Award winner within 2025 (Q2 and Q4) — consistent high performer across both roles.

Role: Technical Specialist Intern

Responsibilities:

- Collaborated with a diverse team to analyze challenges faced by mature-age students seeking university information.
- Supported research, design, and development of a user-friendly chatbot and website for university accessibility.
- Applied Data Science, Angular, HTML, CSS, and Statistical Data Analysis skills during the project.

Impact:

- Helped create a chatbot and website that simplified access to university information for non-traditional students.
- Contributed to an innovative project commended for addressing real user accessibility needs.

PROJECTS

AI Automation Command Center — RevOps Operations Tool

Tech: Python, Streamlit, Pandas, Plotly, n8n Workflow Concept

- Built an operations dashboard that collects, scores, and tracks AI and workflow automation opportunities across 5 internal business functions using a 4-dimension priority model covering impact, effort, confidence, and estimated monthly time saved.
- Designed a roadmap tracker with 4 workflow stages — discovery, concept validation, backlog, and pilot readiness — so teams could see which automation ideas were ready to move forward.
- Added KPI cards, priority ranking charts, department filters, and CSV export so leadership could review the automation pipeline and make data-driven decisions about which processes to improve first

GitHub: github.com/RidhanPar/ai-automation-command-center

Customer Support Intelligence Platform – SLA Breach Prediction & Operational Analytics

Tech: Python, Streamlit, scikit-learn, Pandas, NumPy, Plotly, SQL, joblib

- Built an interactive support analytics platform predicting SLA breach risk and monitoring ticket performance across 500 support records.
- Achieved 96.00% model accuracy and 0.9737 F1-score using Random Forest classification on the demo dataset.
- Delivered a Streamlit dashboard with KPI cards, 5 risk levels, breach rate visualizations, and automated action recommendations.
- Added automated ticket recommendations including Immediate Senior Review, Prioritize Queue Review, Monitor Resolution Delay, and Normal Handling.

GitHub: <https://github.com/RidhanPar/customer-support-intelligence-platform>

AI Operations & Workflow Automation Platform

Tech: Python, FastAPI, React, PostgreSQL, Docker, OpenAI API, Power BI, Workflow Automation

- Built an enterprise-style AI operations platform to support SLA monitoring, ticket intelligence, workflow automation, escalation tracking, and operational decision-making.
- Designed automation workflows for ticket prioritization, approval routing, escalation alerts, and status tracking to reduce manual follow-up across support operations.
- Integrated AI-assisted ticket summarization and recommendation logic to help teams identify risks, understand case context faster, and decide the next best action.
- Developed operational dashboards for backlog trends, SLA performance, ticket volume, escalation status, and team-level productivity insights.

- Created a scalable full-stack architecture using FastAPI, React, PostgreSQL, Docker, and BI reporting concepts to demonstrate how AI and automation can improve speed, quality, and data-driven decisions.

GitHub: <https://github.com/RidhanPar/ai-ops-workflow-automation-platform>

Customer Support Intelligence Platform – SLA Breach Prediction and Operational Analytics

Tech: Python, Streamlit, scikit-learn, Pandas, NumPy, Plotly, SQL, joblib

- Developed an interactive support analytics platform to predict SLA breach risk, monitor ticket performance, and provide operational recommendations.
- Processed 500 customer support ticket records and built a Random Forest model achieving 96.00% accuracy and 0.9737 F1-score.
- Created a Streamlit dashboard with KPI cards, 5 risk levels, breach rate visualizations, and automated action recommendations.
- Added automated ticket recommendations — Immediate Senior Review, Prioritize Queue Review, Monitor Resolution Delay, and Normal Handling.

GitHub: <https://github.com/RidhanPar/customer-support-intelligence-platform>

EduPulse – Student Performance Prediction System

Tech: Python, Flask, scikit-learn, Pandas, NumPy, HTML, CSS, Jinja, joblib

- Developed a web-based student early warning platform to predict academic risk and compare predictions with actual outcomes.
- Evaluated 4 ML algorithms with automatic best-model selection; selected Random Forest achieving 93.67% accuracy, 0.9057 F1-score, and 0.9949 ROC AUC.
- Validated predictions on 79 unseen student records, achieving 89.87% accuracy and 85.93% overall comparison score.

GitHub: <https://github.com/RidhanPar/edupulse-platform>

Smart Shift Swap Approval System — Self-Initiated Internal Project at TELUS Digital

Tech: Google Sheets, Advanced Formulas, Data Validation, Workforce Reporting

- Designed an internal shift swap automation system to streamline employee swap approvals and scheduling coordination.
- Built automated conflict detection and rule-based validation using advanced Google Sheets formulas to prevent scheduling overlaps.
- Reduced manual scheduling effort by centralizing swap validation into a structured automation-driven workflow.

Taxi Transportation Automation System — Self-Initiated Internal Project at TELUS Digital

Tech: Google Sheets, Advanced Formulas, Data Validation, Operational Reporting

- Designed an internal transportation automation system to streamline employee taxi eligibility validation and approval workflows.
- Built rule-based approval mechanisms using advanced Google Sheets formulas, lookup functions, and validation logic.
- Reduced manual review effort by centralizing transportation workflows into a high-volume automation-driven system.

COVID 19 DATA ANALYSIS

- Created a database in SQL to analyze COVID-19 data Based on COVID deaths and covid Vaccination over the world.
- Used Joins, CTE's, Temp Tables, Windows Functions, Aggregate Functions, Data type Conversions and created Views to explore the global data on confirmed COVID-19 deaths.

- Built a dashboard in Tableau by reporting my finding

GitHub: <https://github.com/RidhanPar/DataAnalysisProjects/blob/main/CovidDataExplorationScript.sql>

Data Visualization and Business Intelligence Using LOOKER

- Developed an interactive dashboard using Looker Studio to analyze and visualize order data, enhancing strategic decision-making capabilities.
- Designed various charts to display key metrics such as order trends by month and year, regional sales distribution, and performance by customer segments and product categories.
- Synthesized complex datasets into actionable insights, presenting order volumes, customer distribution, and sales performance across different

Live Dashboard: <https://lookerstudio.google.com/reporting/94f4c3d9-5233-457c-8e15-354910b8b7ae>

HOUSING DATA CLEANING PROJECT

- Executed a SQL data cleaning project for the Nashville Housing table, utilized advanced SQL functions and techniques such as CONVERT, ISNULL, SUBSTRING, and PARSENAME to standardize date formats and segment complex address fields into structured data columns.
- Implemented data integrity checks, including duplication removal with ROW_NUMBER and partitioning logic, significantly improving database performance and query response time.
- Enriched the dataset by filling in missing address details from comparable records and transforming abbreviated entries into readable formats using conditional (CASE) statements.
- Facilitated better data analysis and reporting capabilities by ensuring all entries were unique and standardized, supporting subsequent real estate data assessments and decision-making processes

GitHub: <https://github.com/RidhanPar/DataAnalysisProjects/blob/main/DataCleaningSQLProject.sql>

CASINO DATA VISUALIZATION PROJECT

- Utilized Tableau to analyze and visualize complex datasets from a casino.
- Expertly created 6 different Dashboards Contains multiple charts and graphs to display monthly trends and quarterly percentage changes in casino operations.
- Developed innovative visualizations, including graphs highlighting critical casino statistics and operational insights.
- Employed advanced Tableau functionalities like calculated fields using 'Fixed' expressions and dynamic user inputs through parameters.
- Demonstrated proficiency in data manipulation and presentation by adjusting original datasets for optimal visualization performance.

Live Dashboard: https://public.tableau.com/app/profile/ridhan.parvendhan/viz/Evol_task/WagerT1#1

DATA ANALYSIS AND VISUALIZATION OF MOVIE INDUSTRY DATASET

- Led an analysis project utilizing Python (Pandas, NumPy, Seaborn, Matplotlib) to extract insights from a movie dataset through data cleaning, manipulation, and visualization.
- Performed detailed statistical analyses to explore correlations between movie attributes and financial outcomes using Pearson, Kendall, and Spearman methods, visualizing these relationships with regression plots and heatmaps.
- Improved data quality by identifying and removing duplicates, filling missing values, and transforming categorical variables into numerical formats, enabling more accurate predictive modeling of movie revenues.

EDUCATION

Master of Science in Computer Science

RNU – Riga Nordic University, Riga | May 2024 – Present | Expected Graduation: 2026

Bachelor of Engineering Science in Computer Science and Control

Riga Technical University, Riga | Jan 2021 – Jan 2024

Field: Computer Science and Information Technology | Final Grade: 6.52 | Credits: 180 ECTS

Thesis: Comparative Analysis of Pandas and Polars Python Libraries

CERTIFICATIONS

Data Visualization with Python — IBM via Coursera | Dec 2024

- Built interactive dashboards and visual narratives using Matplotlib, Seaborn, Plotly, and Folium.
- Applied Data Visualization best practices to analyze and communicate insights from real-world datasets.

Credential: https://www.credly.com/badges/8324a909-d39e-4462-a1f1-b49acca69aba/linked_in_profile

Google Data Analytics Professional Certificate — Google Career Certificates | 2025

- Completed an 8-course professional program covering data cleaning, transformation, visualization, and storytelling.
- Gained hands-on experience in SQL, R, Tableau, Google Sheets, and real-world business analysis scenarios.

AWARDS

Above & Beyond Award – Q4 2025 | TELUS Digital

- Recognized for outstanding performance, innovation, proactive problem-solving, and contribution of creative solutions beyond standard responsibilities.

Above & Beyond Award – Q2 2025 | TELUS Digital

- Awarded for exceptional dedication, results-driven performance, and proactive contribution to team and organizational goals.

Two-time recipient within 2025 (Q2 and Q4) — consistent high performer recognized across both roles.

1st Place Winner – Mobility City Challenge 2022 Hackathon | Riga Airport & University of Latvia

- Competed among 105 students from six Latvian universities across 23 teams.
- Led team RIX3027 to first place, won a EUR 1,000 prize, and qualified for the European Grand Final in Barcelona, Spain.
- Competed against teams from Portugal, Lithuania, and Slovenia in the international final.
